

Samarth Goel

📍 Pune, Maharashtra · samarthgoelofficial@gmail.com · +91 9769277473 · <https://demoronin.xyz/>

Education

La Martiniere College

High School Diploma, Finished 12th grade, *GPA: 3.5*

Lucknow, Uttar Pradesh

March, 2014 - July, 2022

Ajeenkya DY Patil University

Bachelor of Computer Applications, Game Programming

Pune, Maharashtra

July, 2026 - June, 2029

Experience

Reliance Games

Technical Artist, Intern

Pune, Maharashtra

02 Feb, 2026 - 30 June, 2026

- Wrote HLSL shader code in Unity for the live target platforms Android and iOS.
- Lead the game WWE Mayhem's conversion from the Built-In render pipeline to the newer Universal render Pipeline which allowed us to use more modern flexible rendering features.
- Rewrote legacy shader code for the built-in render pipeline to support the scriptable render pipeline paradigm with better post processing grading.
- Profiling GPU and CPU performance on Android, optimized shader code to run better on the target Platform which achieved better performance on target hardware.
- Wrote python code for automating the builds of the games using Jenkins. Made internal build system scripts for faster compilation on Linux maximising all threads available on the CPU.
- Made internal texture compression block size tools to validate better compression ratios of textures. The tools let the artists see which block size and compression scheme to choose in Unity.
- Converted WWE Mayhem's ETC1 texture compression support to use the new ASTC texture compression scheme for mobile platforms. Which achieved a smaller final build size of the game
- Did development on the Nintendo Switch for an unannounced title, mainly adding platform support code.
- Used the Nintendo SDK platform tools to debug and profile GPU shader code and CPU game logic on it.
- Ported over in-game systems from various other game titles to work with WWE Mayhem such as events and post processing.
- Made tools for 3D artists in Blender to streamline authoring game assets, faster texturing turnaround.

Freelance

Systems/Graphics Programmer

November, 2024 - Present

- Did source ports and made native builds of Quake III and the Doom 3 source code for Linux and FreeBSD. Migrated the Quake III SDL2 implementation to the newer SDL3 middleware.
- Made builds of The Simpsons Hit & Run legacy source code for modern platforms such as Windows 10.
- Compiled and extended the codebases of RAGE, Luna and Frostbite engines on Windows.
- Created custom shaders and game logic code and updated the tools pipeline to author game content for Rockstar's RAGE game engine.
- Compiled a custom build of the Linux kernel by extending the CPU scheduler.
- Built a custom Windows XP build with the source code.
- Compiled a build from the source code of CD Projekt RED's game engine.
- Made the source code of Spiderman 2 build on Windows.
- Made builds of Minecraft LCE from the source code on Windows & Linux.

Skills

Programming Languages: C++, C#, C, Python, Lua, GLSL / HLSL / OSL / Slang
GNU/Linux: Git, Dev-Ops, Sys-Admin, Self-Hosting
Game Engines: Unity, Godot, Luna, RAGE, Frostbite, idTech, Source
3D Programs: Blender, Substance Painter, Gaea, Houdini, Marmoset Toolbag
Hobbies: Origami papercraft, Illustrative technical drawings and the Piano.
Extracurriculars: Swimming, Public Speaking
